The Vacuum Arch System

The Vacuum Arch is a modern solution to your shade structure and piping needs. Its functional design delivers vacuum hoses directly to your customer's door. It integrates your central vacuum system, piping and filtration into a streamlined structure for a custom look.

Whether you need one or 100 vacuum hoses, the Vacuum Arch lets you create a support structure to your specs. And with two or more arches, you can add a canopy to create an inviting, shaded vacuum area.

Other options include cyclonic primary separators for each arch, and vacuum-on-demand metering devices. Because the Vacuum Arch is modular, it can grow with your business.

The Vacuum Arch – the modern solution for piping, canopy and support needs.

The freedom to choose – start with your arch and add your options.

Start with your Arch

- Each arch can serve one or two customers – you decide the number of hoses.
- Vacuum tool is delivered directly to the customer's door
- Fool-proof hose hanger is easy to use – fewer hoses lying on the ground.
- Debris canisters can be mounted to the structure.
- Arch design maximizes usable space and flexibility.
- System is modular and expandable so it can grow with your business.
- Built to last, the all steel heavy-duty construction features durable epoxy primer with a urethane top coat.
- Choose a color to complement your location.
- Engineering for your city is available at additional charge.

Choose Your Canopy

- Add a canopy to create an attractive vacuum area (requires at least 2 arches)
- Choose from a variety of solid and mesh shade materials to complement your site.
- Solid canopies are solution-dyed to give excellent fade and weather resistance.
- Mesh canopies are vinyl coated polyester for extreme durability.

Optional Primary Separators

- Compact cyclonic separators can be added to each arch for easy recovery of customer items accidentally vacuumed.
- Primary separators capture dirt and debris before air enters piping – this extends equipment life.
- Each separator serves up to two hoses.
- Debris canisters can be mounted to the structure directly below the separators for easy maintenance and no more missing trash cans.

Add the IntelliVac to Meter Airflow

- Meter air flow and manage electrical cost with the IntelliVac.
- You decide how long customers vacuum free of charge.
- Turn your free vacuums into a profit center by offering additional vacuum time for purchase.
- Payment methods can include token, coins, bills, credit cards, or keypad.
